

Historic, Archive Document

Do not assume content reflects current scientific knowledge, policies, or practices.

You may still need certain seeds. Let this 'reminder-list' help you decide on the kinds and amounts. Seed-Quality in every item is fine. Prices very fair (see inside). Supplies ready. Order today. Thanks.

ALFALFA

If you plan to sow alfalfa seed this fall (or yet this spring) . . . **BUY it NOW!** It's been a long time since the supply of true-northern, hardy alfalfa seed was so nearly exhausted. Beside "Northwest" brand regular alfalfa, there is still some Grimm-type. Also Canadian and Buffalo. No big quantity of any, but **FINE-Quality** of all. And ready to go to you instantly. Consult price-list inside.

SOYBEANS

There is more interest in this crop than was evident for a number of years. Our soy-bean seed sales are quite a bit ahead of last year at this time. Markets have shown strength right along. Hawkeye and Lincoln, both the yellow-type beans—are in good demand. Wilson Blacks still rank as favorite for hay-production. Suggest prompt orders.

OATS . . . BARLEY

Here are strains that have proven themselves as leaders. In Seed Oats — "Andrew" and "Clinton" are available. Present stocks are small. But seed-quality is splendid. All lots treated. Ready to ship. In Seed Barley—two fine strains, "Moore" and "Wisconsin 38". Also "Henry" Spring Wheat.

CLOVER . . . TIMOTHY

Top-quality regular Red Clover seed. And the lower-cost, taller-growing Mammoth clover. Just small remaining stocks of Certified Cumberland and Kenland Red Clovers. Beautiful Alsike seed, thoroughly cleaned and tested. Sound-growing, clean Timothy seed, and at much lower cost than a year ago.

Money-Saving "Economical Mixture", composed of about half Red Clover, quarter Alsike, quarter Timothy (as catalog explains). Many more folks are making this saving this year. Sales of the mixed Timothy and Alsike (20%) are also way up from last year's. Both of these lots are recommended.

High-quality Sweet Clover seed - three strains - see price-list.

LADINO CLOVER

The fastest-gaining legume of the past generation. Most all sections of the country now acclaim its merits. Has opened an entirely new era of pasture-success that didn't exist before. Please refer to your Hoffman Catalog for complete details.

ORCHARD GRASS . . . "Lincoln" BROME GRASS

True, Ladino thrives with, and helps along to better success, the regular popular grasses including Kentucky Blue and others. Yet, if you go into certain sections, you will find real boosters for the combination of Ladino with Orchard grass. In other areas they like Brome grass as the companion of Ladino. Brome and Alfalfa are likewise true companions on a great many farms you visit.

SUGGESTION: If you are not sure of any grass combination, why not consult your County Agent or nearby Experiment-Station men? They keep in close touch with the most recent developments. Will gladly share detailed information, instructions, best practices, with you.

Hoffman Seeds

PRICES April 9, 1951

Issued at

Landisville, (Lancaster County) Pa.
by A. H. Hoffman, Inc.

Bags supplied at no extra charge. FREIGHT PAID on shipments weighing 100 lbs. or more —to Railroad freight stations in Pa. N.J. N.Y. Del. Md. W.Va. Conn. R.I. D.C. Mass.

Please figure at the "bushel rate," using the "per-pound" quotation ONLY when ordering LESS than ½-bushel of an item.

HELP INCREASE THE U.S. CORN SUPPLY RIGHT THERE ON YOUR OWN FARM ... PLANT FUNK G HYBRID CORN

More Funk G seed is being planted in Hoffman territory this year than ever before! For one big reason: more and more people are noticing that the planters of Funk G seed are the folks who are getting the best corn crops! There's a sound basis for all of this fine success. It's two-fold: first, the seed is bred right . . . and, it is PROVED RIGHT, in advance, for the particular area and conditions in which it is to be planted. Its user can DEPEND on it!

No other corn organization equals the details of breeding, research, and proving, which back every Funk G strain planted thruout the east.

No joking . . . you really can help up America's supply of corn, planting your right Funk G Hybrid seed-strain. It's being done by others of your area, many others. No reason for you to realize less from your corn crop! And there's nothing wrong with trying to make every acre we farm, pay us all it can!

Better-Corn "Satisfaction" . . . Everywhere!

- "Largest and best crop I ever raised." (N.Y.)
- "No disease or trouble of any kind." (Conn.)
- "Stood up until late November. Very well pleased." (Pa.)
- "Gets going in cold weather. Stands well in heavy storms. Grows extra tonnage on less acres." (N.J.)
- "Nicest 29 acres of corn I ever saw . . . farming 31 years." (Pa.)
- "Stood drought best. Had high yield. To me there's no other corn like Funk G." (Md.)
- "No trace of corn borer. Charts say 9 acres should fill our silo. Our Funk G filled it from 4 acres." (N.Y.)
- "Never had corn develop such ears. Does well on thin soil, wonderful where soil is good." (Ohio)
- "My favorite through 8 years. Yields heavy fodder. Good ears. Withstands strong winds." (Del.)
- "You are sure of corn to feed when you plant Funk G. Withstands wind, storms and drought." (W. Va.)

To Replace any Damaged or Shortened Crop

For hay in any such emergency, you might choose Sudan (next column) to help you out. Another popular choice is often Millet. Two strains, Japanese and Golden are in stock here. Soy Beans are often used successfully for such purposes.

For forage, Sorghum is very popular with many folks. Even in regular crop-planning. There has already been heavy sale of this item this year.

For extra home-grown feed, there might be some extra acres put to Oats or Spring Barley. Buckwheat, sown late June or early July, helps out for many folks every year.

RYE GRASS

Let us supply your Rye Grass seed. Have it on hand, ready to sow on every acre you plant to corn . . . at last cultivation. It provides the best-known winter protection to thousands of fields. Provides good topgrowth to turn under. Helps greatly to stop the loss of valuable topsoil by erosion. Hoffman seed is TOP quality. Northern U.S.-grown. Tests 99% and better in purity. 90% and more in germination.

SUDAN

Used every year, for dependable cow-pasture through the hot summer season, when regular other pastures so often stop growing. Sudan thrives in heat. Here are two strains . . . the newer Sweet Sudan planted by the majority of Hoffman customers today . . . and the regular-type Sudan, used for many years for successful relief of emergency hay and pasture situations.
